Input hotkeys and macros to create keyboard shortcuts. KEYMACRO is intended to be used as an alternative to the Windows keyboard macros. KeyMacro is an alternative to the Windows keyboard macros. What are keyboard macros? Keyboard macros are built-in shortcuts that can be assigned to any combination of keyboard keys. Windows XP uses Ctrl+Alt+Del to trigger key macros (see KB+M). In comparison, the KeyMacro program enables to define keyboard macros by using hotkeys and hotstrings. KeyMacro also enables to create custom keyboard shortcuts for your web browser or multimedia applications. Keyboard macros do not interfere with other programs or operating systems, however, they only work in the current context. If your working set is locked, the keyboard macro will not be triggered. KEYMACRO Features: ... MemoryCard Reader Pro Description: The MemoryCard Reader Pro is a memory card reader and editor. The program is written in VB6, and it supports most of the popular memory cards such as CF, SD, SmartMedia, MiniSD, MemoryStick, XD, and others. The MemoryCard Reader Pro includes all the features you need to read and edit your memory cards and data. Please note that the program can read memory cards only up to 16 GB in capacity, and it can handle cards with data larger than the maximum. Features: ... ShuttleCheck Pro Description: ShuttleCheck Pro will check you web site on any computer in real time. It will check pages, images, css, javascripts, in other words all files that can be downloaded or viewed from your web page. For each file that needs to be checked, it will check if the web site is accessible, and if not it will download the file. Check a web page in a few seconds and the user doesn't need to wait for the page to download. With the help of this program, you can:

- Check your web site: This will check each single page of your site.
- Check pages of a web site: This will check pages of your site (including images, css and javascript).
- Check specified files of a web site: This will check specified files of your site (including images, css and javascript).
- Extract files from a site: This will extract the specified files from your site (including images, css and javascript).

KEYMACRO is a software utility designed for keyboard macros. The software supports both key combinations and key assignments. The utility can be integrated with both Microsoft Windows and DOS. Create and manage as many macros as you like. Record keystrokes from the keyboard (the program operates at both macro and single keystroke level) using different modes. You can use a joystick for mouse emulation. You can define the hot key combination that will start a macro. You can add a combination of keystrokes for executing a specific function, such as the "Save"

---

key combination to exit the application. The "Hot Key" mode supports a faster recording of keystrokes. You can use hot keys to start or stop recording a macro, or use it as a key trigger to start a repeating macro. You can assign any keystroke combination to a macro. In order to ensure that the macro runs exactly as you programmed it, we record the entire process in memory before starting the macro. The program can be used as an effective keyboard shortcut recorder. You can use one or many hot keys to start and stop a recording session. You can specify the hot keys for a recording session, and the program will play back the sequence of keystrokes as a macro. Hot Keys are a great way to automate common tasks, especially when combined with macros, as you can define a keystroke combination to start a session, and then a key combination to end the recording session. For example, you can use hot keys to send a text file to a diskette, saving it every time you press a hot key. Another useful example is to have the hot keys that move the cursor to the beginning of a file. Keyboard macro systems are used in many applications, such as in auto pilot, medical, industrial control, office and home automation and in automotive and other types of equipment. Keyboard macro capabilities allow you to configure your keyboard to perform a number of tasks, all without having to use a mouse. A series of keystrokes is recorded as a macro and can be played back by pressing a designated hot key combination. The program can be configured to save macros when a recording session is started, or when a hot key is pressed. Keyboard Macro Editor is an effective way to create and save macros in Microsoft Windows and DOS. MacroBuster Description: What are the common keys being used in a program? How many times do you have to type the same key combination? You must press a particular key
