We need a base model from CZ (or CS 1.6) from which skeletal animations (sequences) can be stolen. So, go to cstrikelmodelsplayer folder and grab models. If you took a model from CS, then it will have an icon in the form of a wolf's head in the upper right corner. If taken from CZ, then her name has the word CZ. Now we need the cstrike_russian.ini file - it is in this file that the skeletal animations of all models are located. Open it with notepad or another text editor, find the line player.add_skeletal_animations and remove the space before it. As a result, your model will have skeletal arms and legs, or a skeletal torso. fffad4f19a
