The user had to have JavaScript enabled in their browser. how to scan a barcode with python program When I scan the Barcode it says that I have to install a driver and I do and it still says I have to install a driver and the.txt is not even reading the qr code. The error is that I have to install a driver. The.txt is not reading the qr code. A: QR codes are a type of image data. The only data required is the image itself. There's no data encoded in the QR codes. QR codes require the viewer to have a QR code reader to decode the data. If you want to use the barcode, you can use the.TXT file, only a field that says if the data is valid or not. These lovely folks were in my city today. I love that they're cooking up
